RECURSION

In imperative languages, we can easily write recursive code:

Assignment Project Exam Help

d

<https://eduassistpro.github.io>

Add WeChat `edu_assist_pro`
... by referencing the method itself by name.

So far, we haven't directly seen iteration or recursion in the lambda calculus.

RECURSION

In the last tutorial you tried to reduce:

Assignment Project Exam Help

$$(\lambda x.xx)(\lambda x.xx)$$

<https://eduassistpro.github.io>

Add WeChat edu_assist_pro

RECURSION

In the last tutorial you tried to reduce:

Assignment Project Exam Help

$$(\lambda x.xx)(\lambda x.xx)$$

... and d

<https://eduassistpro.github.io>

Add WeChat edu_assist_pro

RECURSION

In the last tutorial you tried to reduce:

Assignment Project Exam Help

$$(\lambda x.xx)(\lambda x.xx)$$

... and d

<https://eduassistpro.github.io>

This is

Combinator:

Add WeChat edu_assist_pro

$$W \equiv \lambda f. (\lambda x. f(2x))$$

RECURSION

In the last tutorial you tried to reduce:

Assignment Project Exam Help

$$(\lambda x.xx)(\lambda x.xx)$$

... and d

<https://eduassistpro.github.io>

This is

Combinator:

Add WeChat edu_assist_pro

$$W \equiv \lambda f.(\lambda x.f(2x))$$

Next week, we'll use this to compute recursive functions in the lambda calculus.

OUTLINE

Assignment Project Exam Help

► Revision - Lambda Calculus

- <https://eduassistpro.github.io/>
- Encodings
- Add WeChat edu_assist_pro
- Functional Programming: LISP

LISP

Assignment Project Exam Help

- ▶ LISP is the second oldest programming language in common
 - ▶ <https://eduassistpro.github.io>
 - ▶ Is a functional programming language
 - ▶ Is a practical implementation of the Lambda Calculus
 - ▶ Has many dialects (e.g. Clojure, Common Lisp, Scheme, etc.)
- Add WeChat `edu_assist_pro`

LISP = LIST PROCESSING

► LISP has atoms

- Numbers, e.g. 10
- Identifiers, e.g. Foo

► <https://eduassistpro.github.io>

- can contain atoms
 - can contain nothing (empty)
- Very small syntax:

`<object> ::= <atoms> | <list>`
`<list> ::= "(" { <object> } ")"`

Add WeChat edu_assist_pro

LIST EXAMPLES IN LISP

Assignment Project Exam Help

```
(+ 1 2)
(* (+ 1 2) (
  (sq 1 2)
  (setq a 100)
  (defun sq (n) (* n n))
  (let ((a 6)) a)
  (if t 5 6)
  (cons 5 6)
  (cons (cons 6 7)))
```

Add WeChat edu_assist_pro

CONCEPTS OF LISP

Assignment Project Exam Help

<https://eduassistpro.github.io>

► Even *LISP* is written as a list.

► No other data structures

Add WeChat edu_assist_pro

EVALUATION

Assignment Project Exam Help

- ▶ Prefix notation of function calls as lists

- ▶ <https://eduassistpro.github.io/>

(+ 4 2)
(+ 3 (- 3 1))
(sq (* 4 2))

Add WeChat edu_assist_pro

NUMERICAL FUNCTIONS

► Numerical operations:

- Addition: (+ 1 2)
- Subtraction: (- 1 2)

- <https://eduassistpro.github.io>
- Base Exponent: (expt x y)
- Trigonometric Functions: (sin x)
- Absolute Value: (abs x)
- Modulo: (mod x y)
- Rounding: (round x)

Add WeChat **edu_assist_pro**

INTERACTION

Assignment Project Exam Help

- ▶ Interaction with lisp is done in a *read-eval-print loop*
- ▶

<https://eduassistpro.github.io>

- ▶ Example:

Add WeChat edu_assist_pro

3
(+ 1 2)

VARIABLES

- ▶ Variables can be defined by:

Assignment Project Exam Help

▶ <https://eduassistpro.github.io>

▶ value of the variable

▶ Example:

Add WeChat edu_assist_pro

```
>> (setq a (+ 5 3))
```

```
8
```

```
>> a
```

```
8
```

QUOTE

Assignment Project Exam Help

- If lists should not be evaluated, use function quote

<https://eduassistpro.github.io>

- There is a short-hand form, using a single quo

Add WeChat `edu_assist_pro`

```
>>> (setq a '(+ 1 2))  
(+ 1 2)
```

CONDITION FUNCTION

Assignment Project Exam Help

- ▶ Definition (`(if <cond> <true-value> <false-value>)`)
- ▶ Boolean values in LISP are given by two symbols

<https://eduassistpro.github.io>

2

>> (if (= 10 10) 1 2)

1

>> (if () 1 2)

2

Add WeChat edu_assist_pro

PREDICATES

- ▶ Type checking predicates
 - ▶ (`(atom x)`) checks whether `x` is not a list
 - ▶ (`(integerp x)`) checks whether `x` is an integer
 - ▶ (`(numberp x)`) checks whether `x` is a number

▶ <https://eduassistpro.github.io>

- ▶ Equality
 - ▶ (`(equal x y)`) checks structural eq
 - ▶ (`(eq x y)`) checks atom equality
 - ▶ (`(= x y)`) checks numerical equality

- ▶ Logical operators
 - ▶ (`(or x y)`) logical OR
 - ▶ (`(and x y)`) logical AND

Add WeChat `edu_assist_pro`

FUNCTIONS

- ▶ Function declaration:

```
(defun <name> (<arg1> <argn>) body)
```

- ▶ Translates to:

<https://eduassistpro.github.io>

Add WeChat edu_assist_pro
(* x (factorial (FACTORIAL
>> (factorial 4)

24

- ▶ Next week we'll do this in lambda calculus directly - without the impurity of defining variables

BINDINGS

Assignment Project Exam Help

▶ Definition:
(let ((<name1> <value1>) ... (<namen> <valuen>))

<https://eduassistpro.github.io>

(+ (* a b) c))

Add WeChat edu_assist_pro
17
=>a
Error: variable A is unbound

BINDINGS (2)

Assignment Project Exam Help

- ▶ Let allows local bindings of variables
- ▶ Bindings might be nested – innermost variable is taken

<https://eduassistpro.github.io>

Add $((\text{a} \ 5))$
WeChat edu_assist_pro

LIST CONSTRUCTION

Assignment Project Exam Help

- ▶ Construction with cons: <cons><element><list>
- ▶ Cons returns a new list with <element> as first element,

▶ <https://eduassistpro.github.io/>

(1)
Add WeChat edu_assist_pro

```
>>(cons 'a '(b c))  
(a b c)  
>> (list 1 2 3)  
(1 2 3)
```

LIST ACCESS

Assignment Project Exam Help

- ▶ Access first element: (first <list>)
- ▶

<https://eduassistpro.github.io>

>> (rest '(a b c))
